

### Keep Your Children Safe from Internet Threats

Webroot®, maker of the award-winning Spy Sweeper®, now introduces Child Safe®, the most comprehensive and easy-to-use solution to keep children safe on the Internet.

Child Safe is a powerful program that enables parents to control individual settings for each child:

- Filter objectionable Web content and record all Web sites that each child visits
- Manage your child's computer and Internet time
- Limit online chat, game playing or other programs to the days and times you specify
- Receive e-mail reports for all monitored activities
- Lock-down access to Windows® settings
- Automatically log your child off at bedtime
- Free customer telephone and online support
- Compatible with Windows Vista™

Once installed, Child Safe can be removed only by using the administrator password. Because no one else can uninstall the program and there is no way to bypass it, you can trust that your family is protected whenever they use the Internet.

### Gain Complete Content Control

With Child Safe, you have complete control over the Web sites your children can access based on any combination of over 60 content categories, specific web site addresses or keywords. Control settings may be the same for all users, or specified independently for each child. Child Safe provides you with peace of mind that your children aren't viewing inappropriate Internet content.

### Define Schedules with Program Control

Child Safe provides almost limitless control for accessing any application on the PC. You can easily define a schedule to manage each child's use of specific programs. For example, allow only the use of spreadsheets and word processing software Monday through Friday, but grant access to game playing for three hours per day on weekends after 3 p.m. The combinations are endless!

### **Limit Time Spent with Time Control**

Child Safe enables you to determine how much computer time is appropriate. You allocate the amount of time each day that your children spend on the computer accessing the Internet or playing games. You can schedule times and durations independently for each child. Our unique Temporary Password feature enables you to set up single-use time extensions so your child is not locked out when schoolwork is due or when unforeseen “emergencies” arise.

### **Know What Sites are Visited with Usage Reports**

With Child Safe’s Usage Reports, you will know the Web sites your child visits, the programs they used and when they were active on the computer. Review these reports from the PC or have them e-mailed to you on a daily, weekly or monthly basis. You decide what type of activities you want to know about, and Child Safe reports it to you.

### **Protection from Program Bypass**

Your child cannot bypass, kill or circumvent Child Safe. Even computer-savvy children will not be able to see it running. Child Safe prohibits any attempt to change the clock, rename or reinstall the program or tamper with the product in any way. We know because we’ve tested it with teenagers!

### **Seamless Windows Integration and Restricted Access**

Unlike some parental control products that require cumbersome logins, Child Safe integrates tightly with Windows, adding layered protection to your existing user accounts so there are no confusing log in routines or additional passwords to remember. Child Safe also restricts access to many Windows components and settings to prevent configuration changes. Restrict access to the contents of selected drives, Administrator Tools, Control Panel and Network controls, Taskbar and Start Menu properties, Command Prompt and more!

### **Convenient Network Support and Remote Administration**

Child Safe may be installed on up to three computers and supports an unlimited number of users on each PC. Child Safe’s individual user settings can be conveniently configured and modified from any computer on the network.

### **System Requirements**

OS: Windows 2000, Windows XP, Windows Vista

CPU: 133 MHz Minimum

Memory: 128 MB RAM

Disk: 5 MB

### **About Webroot Software, Inc.**

Webroot Software, a privately held company based in Boulder, Colorado, creates innovative privacy, protection and performance products and services for millions of users around the world, ranging from enterprises, Internet service providers, government agencies and higher education institutions, to small businesses and individuals. The company provides a suite of high-quality, easy-to-use software that guides and empowers computer users as they surf the Web, protecting sensitive information and returning control over computing environments. Webroot’s software consistently receives top ratings and recommendations by respected third-party media and product reviewers. The company is backed by some of the industry’s leading venture capital firms, including Technology Crossover Ventures, Accel Partners and Mayfield.
