

Webroot Desktop Firewall is your first line of defense against online intruders

Designed for novice and expert users alike, Webroot Desktop Firewall offers comprehensive bidirectional firewall protection against online intrusions. This robust software acts as a data gatekeeper, monitoring Internet activity coming in and going out of your computer. Webroot Desktop Firewall is a crucial component of online security to stop the assault of constantly evolving online threats.

Webroot Desktop Firewall is completely compatible with anti-virus and anti-spyware software. The dynamic program works well with all types of Internet connections and can be set up to protect a stand-alone PC or a home network.

Unmatched Firewall Protection

Online intruders use sophisticated methods to attempt to take over your PC, such as remote access Trojan horses, worms and other real threats. Webroot Desktop Firewall automatically blocks unwanted activity and gives you peace of mind that your PC is protected against emerging online threats.

Webroot Desktop Firewall:

- Quickly installs and the simple, intuitive user interface makes setup a breeze
- Uncompromising protection from online intruders without inundating users with unnecessary configuration options
- Automatically recognizes common Windows files that require access to the Internet to avoid repeated interruptions for the user
- Stealth Mode makes your PC invisible on the Internet to prohibit communication from computers that want to use your PC for malicious activities
- Tracks down IP addresses that have access to your PC and block future activity, or blocks access from specific computers on your local area network (LAN)

Benefits of Webroot Desktop Firewall:

- Strengthens and expands PC protection against online threats
- Users can shop and bank online with a peace of mind that they are protected against online scammers trying to access their PC
- A simple, friendly user experience is combined with robust protection
- Chat online with assurance that your PC is hidden from hackers
- Protect your digital assets like your music files by limiting who has access to your PC or home network

Data Sheet

Webroot Desktop Firewall: Key Features

Easy-to-Use

Novice users will appreciate the simplicity of Webroot Desktop Firewall while more experienced users can use the advanced features and options to suit their needs.

Closely Monitors Inbound and Outbound Traffic

Picture your PC as a revolving door with communication constantly streaming in and out. Sometimes this communication is dangerous - Webroot Desktop Firewall actively monitors this activity and alerts you to suspicious traffic.

Controls the Programs that Access the Internet

Instantly authorize programs you trust, such as your Internet browser and e-mail programs, to connect to the Internet and block any suspicious programs that may take over your PC, like remote Trojans, worms or zombie programs.

Automatic Security Alerts

When a program, application or another computer contacts your PC or generates outbound communication from your PC, Webroot Desktop Firewall immediately alerts you to the activity.

Invisible Internet Presence

Turn the Stealth Mode option on to make your PC invisible to intruders searching for vulnerable computers across the Internet, significantly decreasing your chances of an attack.

PC Lock Down

If you experience unexplained computer communication, use the Internet Block option to immediately stop all Internet traffic in and out of your PC. This "panic button" is an instant way to protect your data until you determine the cause of the activity.

Protected File and Printer Sharing

Webroot Desktop Firewall lets you share your files and printers with other computers on your local area network without unnecessarily exposing your PC to online threats.

Comprehensive Event Logs

Webroot Desktop Firewall keeps a log of all Internet activity. Review the log to see if hackers have tried to access your PC or if unknown programs are trying to prompt outbound communications. The user alerts let you know when important security events occur.

Free Customer Support

Our knowledgeable support team provides friendly and expert help regarding set up and use of Webroot Desktop Firewall.

System Requirements

Windows 98 SE, 2000, Me, XP
233 Mhz processor
10 MB hard drive space
64 MB RAM

About Webroot Software, Inc.

Webroot Software, Inc. is the creator and publisher of the award-winning Spy Sweeper line of anti-spyware products for consumers, small businesses and enterprises worldwide.

Based in Boulder, Colo., the company is privately held and backed by some of the industry's leading venture capital firms, including Technology Crossover Ventures, Accel Partners and Mayfield.
